

SNiPER is Eco-friendly

SNiPER is EPA Registered Non-Toxic. It is an excellent cleaning, disinfecting and odor eliminating system that far exceeds other cleaning products. It will keep all surfaces from harboring bacteria, molds, and viruses with its sanitizing action. It eliminates the worst malodors: cigarette, skunk, garbage, chemical, rest room odors and more.

SNiPER is a commercial GREEN product that is qualified to destroy the most harmful pathogens while remaining safe to our environment and thus for our future. It is biodegradable, hypo-allergenic, and has the highest efficacy among disinfectant cleaners. SNiPER is bio-based, chlorine-free, phosphate-free and has no noxious fragrance.

SNiPER does not produce Volatile Organic Compounds like other cleaning agents. It is able to oxidize VOCs and certain toxic gas emissions when used in a fogger for even greater protection for our indoor environments.

Use SNiPER to sanitize cabins, staterooms, lounges, restaurants, gyms, rest rooms, spas, saunas, whirl pools, HVACs and public areas to protect your passengers and crew. SNiPER is certified to kill Legionella which causes Legionnaires' disease.

Products:

- * 4oz Pump Spray Bottle – 12 per Case
- * 16oz Trigger Spray Bottle – 12 per Case
- * 32oz Trigger Spray Bottle – 12 per Case
- * 1 Gal Jug – 4 per Case
- * 2.5 Gal Jug – 2 per Case
- * 55 Gal GREEN Non Toxic Disinfectant Drum
- * Residential / Commercial / Industrial Foggers

SNiPER®

THE IDEAL BIOCIDES

For Cruise Liners

Protect your Business, Passengers and Crew

SNiPER is certified to kill Legionella, Swine Flu (H1N1), Bird Flu (Avian), MRSA (Staph) Salmonella, E coli, Aspergillus, Stachybotrys and much more. SNiPER can be sprayed directly on anything to protect against infection and to eliminate odor. MRSA is easily transmitted via towels, equipment and direct contact. Many of the disinfectants used today are ineffective in controlling these infections and can leave a toxic chemical residue on the surfaces they are used to treat.

SNiPER is ideal in that it exhibits a rapid kill over a wide range of organisms, yet remains completely safe for humans. It uses a mechanical action to disassemble the pathogen on a molecular level. It is selective in its attack and does not use poison to kill. It is used to treat everything from the air we breathe to the surfaces on which we prepare our food. Kill bacteria, virus and mold while eliminating irritating odors with the Ideal Biocide.

Fog your restaurants, entertainment areas, dining halls, rest rooms, meeting rooms, cabins, suites, spas, anything, with SNiPER, to protect, sanitize and eliminate malodor from food, garbage, body odor and more.

Disinfect & Sanitize

Illness and Disease damage the Cruise Liner's reputation and prestige. The passengers' comfort and well being are your business.

SNiPER is safe, non-toxic and extremely effective. Its power lies in its superior formulation. It kills pathogens from the inside out rendering them completely inactive. Some disinfectants only weaken micro-organisms with a poison and the microbial is able to build up a resistance to the poison. SNiPER takes apart its target on a molecular level so it cannot revive. This ensures that micro-organisms will not become immune and that SNiPER will deliver exceptional results every time. SNiPER prevents the development of "Superbugs"!

"I believe that use of these products will make an important contribution to safe and effective indoor air quality."

Herman Sabath, Ph.D. MPH CMC/CMI
Global Leader in Microbial Infections and Indoor Environments

Power, precision and exceptional performance make SNiPER rise above the competition!

Nontoxic, Safe and Child Friendly

HVAC Units Must be Treated

Many illnesses come from dirty and untreated HVAC units. Unmaintained HVAC units can also lead to higher utility costs. Once cleaned, air ducts should be treated with SNiPER for disinfection and residual protection. Systems are available to connect directly to HVAC units to minimize the risk of viral and bacterial outbreaks by systematically fogging the building or specific area with SNiPER to sanitize and deodorize continually.

SNiPER will restore safety and peace of mind to your Cruise!
