Boot - Helmet - Glove Cleaning Protocol

EQUIPMENT NEEDED:

Adjustable Nozzle Spray Bottle with SNiPER®

Clean sponge and clean absorbent cloth(s)

Deep sink or other water source

CLEANING DIRECTIONS:

- 1) If possible, remove any liners from outer shell of gear to be cleaned.
- 2) Arrange gear so that as much surface as possible will be exposed for cleaning. Remember: SNiPER® must touch the source of the odor or microbe to eliminate it.
- 3) Use a spray bottle to spray an even coat of SNiPER® on all contaminated and surrounding surfaces of the gear including all sides, any liner assembly and padding. Note: It is not necessary to saturate or cause puddling of product.
- 4) Allow the SNiPER® to dwell for up to one minute to allow the surfactant to loosen any grime or dirt that is present.
- 5) Hand wash the surfaces of the gear including liner assembly with a lightly dampened clean sponge or clean cloth. Use care to wipe all surfaces very thoroughly to remove all substances or gross filth that may be stuck on surfaces.
- 6) Evaluate the odor and gross filth mitigation and repeat the cleaning cycle if needed.
- 7) For lasting disinfection and deodorization, use a spray bottle to spray a light even coat of SNiPER® on all surfaces of the gear.
- 8) Allow to dry.

Contact Support:

If you have any questions on the direction of use or cleaning actions of SNiPER®, please call: (GER Inc.) Global Environmental Restoration, Inc. (877) 236.4710.
